

CREATE YOUR OWN CONCEPT MAP ON BODY TISSUES

1. Start with your center concept - TISSUES OF THE BODY
2. Draw 4 arrows connecting to the four types of tissues found in the body.
3. From each tissue type, draw arrows (varies in number) to related types
4. For each you want to include linked concepts that describe the tissue type, indicate where it is located, and any additional related terms

This image might help get you started. You will need to copy this onto your own paper (unlined) and complete it.

Grading Rubric				
	4 pts	3 pts	2 pts	1 pt
Connective Tissue	All types represented; details, locations, & functions included	All types represented; details and locations included for most, may be missing key details	Most types represented; key details are not included for some of the types	Some represented; missing key details,
Epithelial Tissue	All types represented; details, locations, & functions included	All types represented; details and locations included for most	Most represented; key details missing for some	Some represented; missing key details,
Muscle			Three types represented; details and locations	Types represented; missing key details
Neurons			Both types represented with details	Types represented; missing key details
Overall Organization		Groups (Types) are clearly marked either in location or with color, easy to locate information	Types are marked in some way, but groups and information is scattered	Map is difficult to follow, appears to have little or no organization
